

## 4.5 Microstrip antenna

### Java applet

The screenshot shows a Java applet window with a light gray background. At the top, there is a horizontal navigation bar with three tabs: 'Input' (with a computer icon), 'Results' (with a graph icon), and 'Graphics' (with a graph icon). The 'Input' tab is currently selected. Below the navigation bar, the main content area contains a section titled 'Frequency Values [GHz]'. This section has three labels: 'Minimum value', 'Step', and 'Maximum value'. Each label is followed by a text input field and a small spinner control. The values in the input fields are '1', '0,1', and '10' respectively. Below these input fields, there are two buttons: 'calculate' and 'Help'.
